PROJECT REPORT

HTML5 AND CSS3

Submitted by: THOKA NAVEEN

University: DR. RVR NRI UNIVERSITY

Course: B.Tech – CSE (AI & ML)

Academic Year: First Year

Contents

1. Wedding Invitation

2. Food Ordering Website — Foodie

3. Travel Destination — Welcome to Goa

4. Technologies Used

5. Learning Outcomes and Conclusion

1. Introduction

This report documents the HTML and CSS projects supplied for review. The submitted files contain three small webpages: a Wedding Invitation, a Food Ordering Website called Foodie, and a Travel Destination page about Goa. Each project demonstrates how HTML structures content and how CSS controls visual presentation, spacing, colors, and responsive behavior. Source code is reproduced from the supplied files.

1. Wedding Invitation

Introduction and Purpose

The Wedding Invitation webpage presents a digital invitation for a wedding celebration. It displays an invitation heading, the couple's names, a short welcoming message, event date and venue details, wedding imagery, and a closing message. The page is designed to communicate event information in a simple, decorative format.

Main Features

Wedding invitation title and welcome text

Couple-name placeholders and “Weds” label

Date, day, and venue details

Decorative image areas and closing message

Responsive CSS adjustments for narrow screens

Webpage Description

The body uses centered text and a serif typeface. The invitation card has a warm ivory background, a double gold border, rounded corners, and a soft shadow. Headings use dark red, brown, and gold shades. The event details sit in a pale cream panel. The CSS includes a media query that reduces card padding and heading sizes on screens narrower than 480 pixels.

Actual Webpage Output and Explanation

The provided reference photo shows the upper part of the invitation page, including a decorative image, the gold welcome line, the dark-red “Wedding Invitation” heading, and the beginning of the couple details. The HTML also includes event details, a second image, and a footer message farther down the page.

Resource limitations: The HTML refers to a local file named m.jpg, which was not uploaded. The second image is loaded from Unsplash and may require an internet connection. The supplied photo is a photograph of a laptop screen rather than a clean browser screenshot, so it is included only as a visual reference and not represented as a newly captured browser output.

2. Food Ordering Website — Foodie

Introduction and Purpose

Foodie is a sample food-ordering webpage that presents restaurant information, a menu, prices, an introductory offer, and customer reviews. Its layout is intended to help visitors browse a small selection of food items and navigate between sections.

Main Features

Header with Foodie branding and navigation links

Home section with restaurant name, rating, cuisine, and delivery estimate

Menu cards for pizza, burger, and biryani with prices

Order Now links that jump to the offers section

First-order discount and customer reviews

Footer and an HTML audio control

Webpage Description

The page uses Arial text and a warm cream background. The header is orange with white text. Sections have contrasting peach and white backgrounds. Menu cards use white panels, rounded corners, shadows, and cropped food images. The CSS uses flexbox and wrapping to lay out cards and includes a media query for smaller screens. The HTML references external image URLs and a local audio file named audio.mp3.mp3.

Actual Webpage Output and Explanation

The expected page structure is a branded orange header, a home introduction, three food cards, a special-offer section, customer reviews, a dark footer, and an audio player. External food images and the local audio file may not appear if the resources are unavailable.

Resource limitations: The HTML references a local audio file named audio.mp3.mp3, which was not uploaded. Food images use external URLs and need internet access. The provided files do not include a clean screenshot of this page.

3. Travel Destination — Welcome to Goa

Introduction and Purpose

This webpage introduces Goa as a tourist destination in India. It provides a short description and organizes visitor information into lists of places to visit, activities to enjoy, and local foods to try.

Main Features

Main heading welcoming visitors to Goa

Goa beach image

About Goa paragraph

Lists of places to visit and things to do

List of foods to try

Webpage Description

The CSS gives the page a light-blue background and uses Arial. A white container with a blue border holds the content. The main heading is centered and dark blue, while section headings are green. The image is displayed at a fixed 300-by-200 size with a black border. Paragraphs are justified and list items use consistent font sizing and spacing.

Actual Webpage Output and Explanation

The webpage presents a centered welcome heading, a beach photograph, and separate sections for information about Goa, sightseeing, activities, and food. The beach image is loaded from Unsplash, so internet access may be required.

Resource limitations: The page uses an external Unsplash image and requires internet access for that image to load. The provided files do not include a clean screenshot of this page.

4. Technologies Used

HTML5

HTML defines the structure and content of each webpage, including headings, paragraphs, links, images, lists, sections, and footer content.

CSS3

CSS controls visual presentation such as colors, fonts, margins, padding, borders, shadows, image sizing, layout, and responsive adjustments.

External Resources

The submitted pages reference external image resources. The Foodie page also references a local audio file. These resources are not embedded in the HTML/CSS source and may require internet access or separate local files.

5. Learning Outcomes and Conclusion

These projects demonstrate the basic workflow of building webpages with HTML and CSS. They provide practice in organizing content with semantic and common HTML elements, applying colors and typography, creating cards and sections, displaying images, using links, and adapting layouts for smaller screens. The projects can be improved further by adding accessibility labels where missing, checking image and audio paths, testing on different screen sizes, and validating all resources before submission.

Submission Note

The report includes all three HTML/CSS project pairs found among the supplied files. The supplied wedding-page photograph is included as a visual reference. It is not a clean browser capture. A true browser screenshot could not be captured reliably in this environment; therefore, no fabricated screenshot is presented. The output descriptions are based on the supplied source code, and missing local/external resources are explicitly noted.
